

PROJECT DELIVERY & HANDOVER REPORT

Custom CRM Database, Automated Workflows & Performance Analytics

Project Title:	CRM Lead Tracking & Analytics Automation System
Client:	Prabuddha Sampath
Developer:	Achintha Kaushalya
Status:	Successfully Delivered & Live (Operational)
Delivery Date:	July 23, 2026
Total Cost:	LKR 20,000.00 (One-Time Payment)

1. Executive Summary

This project documentation marks the formal handover and completion of the CRM Lead Tracking and Analytics system developed by Achintha Kaushalya for Prabuddha Sampath. The system serves as a lightweight, high-efficiency CRM solution hosted entirely on Google Workspace, eliminating any subscription charges.

All features have been fully coded, styled, and verified. The system is equipped with background Google Apps Script automation to prevent data loss, automatically link repeat students to their history, and build dynamic sales and campaign analytics.

2. Project Valuation & Cost Breakdown

Development Module & Deliverables	Amount (LKR)
Database Schema Design & Custom Color-Coding	4,000.00
Automated Lead Triggers (F-Code & Timestamping)	5,000.00
Data Integrity Engines (Duplicate & Repeat Lookup)	4,000.00
Team Roster Operations & Dynamic Validation Sync	3,500.00
Real-time Date-Filtered Summary Dashboard	3,500.00
TOTAL ONE-TIME DEVELOPMENT COST	LKR 20,000.00

3. System Features & Operational Capability

- Automated Unique F-Code Allocation

Maintains clean records. Typing a phone number immediately checks for duplicates. If none are found, the background script auto-generates a unique F-Code (e.g., F1001, F1002) and sets the current date instantly.

- Instant Repeat Student Detection

Finds returning students. If a phone number already exists in the sheets, it flags them as a 'Repeat' and displays their original F-Code in the 'Previous F-Code' column so sales representatives do not assign new duplicate codes.

- Automatic Column Dropdown Validation

Maintains dropdown lists across 1000 rows. Keeps status dropdowns (New, Contacted, Converted, etc.) and Yes/No options for 'Second Call Done' and 'Paid' clean and free of input errors.

- Real-time Team Roster Sync Menu

Simplifies staff updates. Through the 'Lead Tools' menu, you can select 'Add New Member' or 'Remove Member'. The script automatically handles formula updates and refreshes the Assigned Member dropdown options across all rows in real-time.

- Fully Rebuilt Leads Summary Dashboard

Provides instant analytics. Clicking 'Rebuild Summary Sheet' programmatically generates the dashboard. It contains four date-filtered tables: (1) Lead count by grade, (2) Paid conversions, (3) Unresolved pipelines, and (4) Campaign ROI metrics.

4. Future Analytics & Upgrade Possibilities

+ Lead Conversion Speed Metrics

Upgrade the sheets to track the exact time it takes to convert a lead from 'New' to 'Paid' to evaluate team efficiency.

+ Direct API Ad Integration

Connect Google Sheets to your Facebook / TikTok lead ads directly. Leads will automatically appear in the spreadsheet in real-time as users submit them.

+ Team Performance Leaderboard

Develop a visual leaderboard tab ranking sales agents based on total conversions, call success rates, and active pipelines to encourage competition.

+ Scheduled Email Reports

Configure daily evening emails to automatically send the management team a PDF snapshot of the campaign performance table.
